SharePoint Developer

Description

We are looking to hire a SharePoint Developer for a client to support SharePoint Server deployment, development, and administration. This role involves designing, coding, testing, and integrating SharePoint solutions to help meet the goals of the organization.

Responsibilities

- Provide comprehensive support for SharePoint Server deployment, development, and administration.
- Engage in all phases of the SDLC, including requirements analysis, system design, coding, testing, and deployment.
- Develop and implement both front-end and back-end solutions, including out-of-the-box and customized SharePoint features.
- Prepare data for conversion and ensure seamless integration with existing systems.
- Ensure that solutions meet the mission goals and objectives of the organization.
- Collaborate with internal and external stakeholders to gather requirements and provide technical solutions.
- Maintain and troubleshoot existing SharePoint implementations to ensure optimal performance.

Qualifications

- Bachelor's degree in computer science, Information Technology, or a related field.
- Proven experience in SharePoint Server deployment, development, and administration.
- Experience with all phases of the software development life cycle, including design, development, testing, and implementation.
- Proficiency in both front-end (customized development) and back-end (server-side) SharePoint solutions.
- Experience with requirements analysis, system design, data conversion and integration.
- Excellent analytical, communication, and problem-solving skills.
